

Senior Quality Assurance Engineer

Harvest Automation, Inc. is seeking a Quality Assurance Engineer to join our team....

The Quality Assurance Engineer will be responsible for:

- Developing jointly with the design team sub-system and system test and release requirements
- Setting up and performing tests, analyzing and documenting results, and reviewing engineering test data
- Representing the QA team in Design Reviews
- Working with the product development team to continuously improve and refine the product development process.

The candidate must have the following qualifications:

- BS in engineering, preferably Electrical, Mechanical quality or Software
- At least 5 years in product design or quality assurance
- Experience in designing, implementing, and executing mechanical, electrical and embedded firmware tests on computer controlled electro-mechanical devices.
- Experience with revision control, product lifecycle management and product development processes
- Data analysis and test results interpretation
- “Hands on” engineering experience, directly working with test setups and hardware under test
- Strong communication skills and cross-functional leadership
- Thrives in a fast paced rapid growth environment

Harvest is a fast-growing startup in Billerica, MA. We're building robots that do things robots have never done before. Our products will improve working conditions and productivity in real-world, labor-intensive work environments.

Our technical team consists of leading robotics experts working closely with smart, experienced engineers. We're solving exciting technical problems – and using them to build practical commercial products, not just science experiments. Come join our team!

**Please send qualified resumes (with cover letter) to jobs@harvestai.com.
Harvest Automation does not solicit, and will not accept, resumes from recruiters.**
